

I can't believe that the FCC is considering killing the over 6,000 ISPs, which if this passes will happen, and with them thousands of other small and medium sized companies that serve and depend on them. Creation of a duopoly (cable and ILEC) is contrary to the desires of the electorate, will end up compromising freedom of speech and push us further behind the technology race with the rest of the world.

I strongly urge you to not let this happen, as the protectors of the Constitution, Bill of Rights et al, this is wholly against the foundations of this government.

Pass this and we regress, mono/duopolies do not innovate, do not extend, they retrench and limit. Please if you listen to constituents you will find that they do not want us reverted to what existed prior to the breakup of Ma Bell, what next radial pulse dialing?

Thanks for the patience to consider this, and please consider what makes the United States different - the ability to compete in an open market, and the choice to buy from the best provider.

Kelly Corkill
